PROFESSIONAL EXPERIENCE

Senior Software Engineer, Growth | Coinbase (Remote) *2020 – Present*

- **Architected Coinbase's Growth Admin platform** — led evolution of the core growth notifications tool into a unified, centralized platform serving 150+ daily internal users across 100+ product teams, orchestrating 1B+ customer messages/week and eliminating third-party CRM vendor dependency, saving ~$2M/year.
- **Designed and led the Upsell Platform and server-driven UI system** — built a unified upsell framework now powering hundreds of upsell experiences across subscription, staking, and trading; eliminated per-upsell engineering overhead by reducing implementation overhead by over 99% and cut launch time from weeks to under a day.
- **Modernized the Growth Admin frontend architecture** — migrated from a legacy monorepo into a standalone modular codebase with new CI/CD, cutting build times ~50% and deploy times ~63%, removing 10K+ lines of dead code, and enabling multiple downstream teams to build and ship independently.
- **Launched a visual Journey Builder for the Growth Admin platform** — implemented a drag-and-drop workflow builder (nodes, criteria, testing, analytics) now powering 100+ production journeys for onboarding and re-engagement, directly contributing multi-million dollar revenue uplift.
- **Led engineering for Coinbase's marketing web infrastructure and growth stack** — built the marketing newsletter infrastructure and marketing entry points reaching 20M+ customers with 40%+ open rates and 1M+ new subscribers; scaled and stabilized the marketing server (SLOs, caching, GraphQL migration, incident response) through the 2021 bull run and 2022 Super Bowl campaigns.

Technical Co-Founder | Automelodia (Remote) *2023*

- **Co-founded and built an AI music generation platform** — served as technical co-founder and sole backend engineer, designing and shipping a Python REST API with PostgreSQL and architecting the cloud infrastructure on AWS (SQS, EC2/GPU instances, S3) to deploy and orchestrate a music generation model from prompt intake to audio file delivery.
- **Shipped a fully operational product to production** — contributed across the full stack, building the React/TypeScript/Tailwind frontend, integrating Stripe for subscription billing, and delivering a live customer-facing application serving real users.

Senior Software Engineer, App Architecture | ConnectWise (Tampa, FL) *2014 – 2020*

- **Architected and shipped the ConnectWise Customer Portal** — engineered a full-stack multi-tier application serving 100K+ end users, with a mobile friendly React/Redux SPA frontend, .NET Core REST API backend, MySQL database, and multi-region AWS deployment (S3, CloudFront, ECS/EC2).
- **Led migration of a 100+ page legacy web app to React** — directed a team of contractors in building a new client architecture using Redux, ImmutableJS, and TypeScript; established reusable core modules consumed across all application surfaces.
- **Designed and owned the company-wide component library and design system** — built a reusable component library and style guide with modular CSS and jest/enzyme test coverage; partnered with UI/UX design team to define and enforce consistent design standards across the product.

Software Engineer II | CAE USA, Inc. (Tampa, FL) *2011 – 2014*

- **Developed** the Instructor Operating Station for military flight simulation training systems using C#, WPF, and MVVM.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, React, React Native, Node.js, GraphQL, NextJS, HTML5, CSS3, Tailwind, CSS-in-JS, Python, Java, C#

Cloud & Infrastructure: AWS (S3, Lambda, CloudFront, ECS/EC2, Elasticsearch)

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis

Tools & Practices: Git, Figma, AI/LLMs, Design Systems, Agile/Scrum

EDUCATION

B.S. Computer Engineering, Dual Major in Computer Science *2011*

University of South Florida
